RE: Jefferson Community Park Improvements Memorial Fields Restrooms Asbestos NESHAP Survey and Universal Waste Inventory. Project #42425

Dear Mr. Murphy

Verdantas is pleased to provide this report which summarizes the findings of the Pre-Renovation Asbestos Survey conducted at 260 E Jefferson St. Jefferson, Ohio 44047, Parcel ID: 260240007100 (the Property) for The Village of Jefferson.

Background

Verdantas conducted an Asbestos Survey and Universal Waste Inventory, at 260 E Jefferson St. Jefferson, Ohio 44047. The purpose of this project was to utilize an Ohio Environmental Protection Agency (OEPA) licensed Asbestos Hazard Evaluation Specialist (AHES) to locate and identify asbestos-containing materials (ACM) within the building at the address listed above prior to renovation activities. Site-specific information is presented in the following table:

Dates of Inspection:	August 26, 2025
Site Address:	260 E Jefferson St. Jefferson, Ohio 44047
Site Owner Representative:	Steven Murphy
Inspector(s):	Brendan Niehaus: AHES #ES547146
Facility Construction Date:	1950
Number of Buildings:	One
Building Description:	Public Restrooms/Washhouse

Scope of Services

Verdantas' scope of services for this project consisted of the following tasks:

- Visual observations
- Universal Waste Inventory
- Bulk sampling of suspect ACMs
- Polarized Light Microscopy (PLM) analysis of bulk samples
- Final report

Findings of the Asbestos Survey and Universal Waste Inventory are summarized below.

Asbestos Survey

Methodology

Mr. Brendan Niehaus conducted the Asbestos Survey at the property on August 26, 2025. Brendan Niehaus is an accredited State of Ohio asbestos inspectors. The survey consisted of a visual inspection and bulk sampling within the building in accordance with methods outlined in the U.S. Environmental Protection Agency (EPA) guidance document "Guidance for Controlling Asbestos-Containing Materials in Buildings" (Document No. 560/5-85/024)". The U.S. EPA defined an ACM as a material that contains greater than one percent (>1%) asbestos by visual estimation of weight. The inspection and sampling included destructive techniques. Inspector certifications are included in **Attachment A**. A Sample Location Map is included in **Attachment B**

Regulations pertaining to asbestos renovation and demolition surveys include 40 CFR Part 61 (NESHAP), 29 CFR 1926.1101 (Asbestos in Construction), Ohio Administrative Code (OAC) 3701-34, OAC 3745-20 and Ohio Revised Code (ORC) 3710. Samples were collected in accordance with EPA Standard 40 CFR 763 Subpart E, Asbestos Hazard Emergency Response Act (AHERA) and OSHA Standard 29 CFR 1926.1101 Inspection Protocol. The following illustrates the sampling strategy employed by Verdantas:

Surfacing Materials:

In a randomly distributed manner, the accredited asbestos inspector collected bulk samples of surfacing materials, representative of each homogeneous area, and not assumed to be ACBM, as follows:

- 1. Collect at least three (3) bulk samples from each homogeneous area that is 1,000 square feet or less.
- 2. Collect at least five (5) bulk samples from each homogeneous area that is greater than 1,000 square feet but less than or equal to 5,000 square feet.
- 3. Collect at least seven (7) bulk samples from each homogeneous area that is greater than 5,000 square feet.

Thermal Systems Insulation:

- 1. In a randomly distributed manner, the accredited asbestos inspector collected, at a minimum, three (3) bulk samples of thermal systems insulation material, representative of each homogeneous area, and not assumed to be ACBM.
- 2. The accredited asbestos inspector collected, at a minimum, one (1) bulk sample of patched thermal systems insulation, representative of each homogenous area, and not assumed to be ACBM, providing the section of patch was less than 6 linear or square feet.
- 3. The accredited asbestos inspector collected, at a minimum, three (3) representative bulk samples of each insulated mechanical system not assumed to be ACBM, including, but not limited to cementitious material used on fittings such as tees, elbows, or valves. Representative sampling was conducted in a manner sufficient to identify whether each homogenous area is either asbestos or non-asbestos containing.

2

Verdantas.com

4. Bulk samples are not required to be collected from any homogeneous area where the accredited asbestos inspector has determined that the thermal systems insulation is a non-suspect material (i.e., fiberglass, foam glass, rubber, or any other non-ACM).

Miscellaneous Materials:

The accredited asbestos inspector collected, at a minimum, two (2) representative bulk sample of each miscellaneous material not assumed to be ACBM, including, but not limited to ceiling tiles, floor tiles, and associated floor tile mastic. Representative sampling was conducted in a manner sufficient to identify whether each homogenous area is either asbestos or non-asbestos containing.

For the purpose of this report, Verdantas classified the ACMs as being in either Good, Fair or Poor condition. The following are the general definitions of each category:

Good Condition: Any material which is intact with no noticeable damage. Fair Condition: Any material with a small amount of overall or localized

damage (generally less than 10% of the entire area).

Poor Condition: Any material with a large amount of damage (generally greater than 10%

of the entire surface area).

Findings

Verdantas collected a total of sixteen (16) bulk samples from the structure which were separated into twenty-one (21) total layers by the laboratory. Bulk samples of suspect materials were analyzed by Eurofins CEI of Fort Mill, North Carolina using Polarized Light Microscopy with Dispersion Staining (PLM/DS) method.

Eurofins CEI is an accredited laboratory by the National Voluntary Laboratory Accreditation Program (NVLAP) code 600323-0. The PLM/DS analytical method is modeled after 40 CFR Part 763, Subpart F, Appendix A: "Interim Method for the Determination of Asbestos in Bulk Insulation Samples".

A copy of the laboratory analytical report is included in **Attachment C**. Only the asbestos content, if any, is recorded in the bulk sample 'Report of Analysis'. If a material contains equal to or greater than 1% asbestos, it is considered to be asbestos-containing material from a regulatory standpoint. If a material contains asbestos at a level less than 1%, OSHA considers it a potential exposure hazard and all OHSA requirements related to worker protection would apply.

Based upon the analytical results, regulated levels of asbestos (greater than >1%) were detected in four (4) materials. Photographs of materials identified as ACM can be found in **Attachment D**.

3

Materials sampled and laboratory results are summarized in **Table 1**.

Verdantas.com

TABLE 1 Asbestos Survey 260 E Jefferson St. August 26, 2025 Project #42425

HA/Sample	Material	Location/Quantity	Friable	Condition	Analytical Result*
01-(A-B)	White Caulk	Exterior Window Systems. Remove Prior to Renovation - 45 LF	NF- II	Poor	Chrysotile %7

05-(A-C)	Red Brick	and Showers.	165	Гаш	NAD
06-(A-B)	Green/Gray Ceiling Panel	Throughout the Women's Restroom and Showers. Remove Prior to Renovation -600 SF	Yes	Fair	Chrysotile %15
07-(A-B)	Gray/Tan Shingle	Roofing System	NF-I	Good	NAD
	Black Roofing	Tree in grant of the state of t	141		NAD

4

NAD – No Asbestos Detected

NF-I - Category I Non-Friable

NF-II - Category II Non-Friable

Any additional unidentified materials discovered during renovation, demolition or construction activities should be treated as assumed ACM in accordance with regulations 29 CFR 1926.1101 and 1910.1001 and other applicable state and local regulations until proven otherwise through laboratory analysis.

Conclusions and Recommendations

<u>Asbestos Containing Materials</u>

In the 260 E Jefferson St. structure, four (4) materials were found to be asbestos containing by laboratory analysis.

- White Caulk Chrysotile %7
- Gray Caulk Chrysotile %10
- White/Gray Ceiling Panel Chrysotile %15
- Green/Gray Ceiling Panel Chrysotile %15

Sample results containing > 1% asbestos are considered asbestos-containing materials (ACMs) per the EPA regulatory requirements.

Any asbestos removal should be performed by a licensed asbestos abatement company and Ohio Environmental Protection Agency-licensed personnel with oversight by a third party OEPA-Certified Evaluation Specialist.

Universal Waste Inventory

Verdantas staff member, Brendan Niehaus, conducted the Universal Waste Visual Inventory on August 26, 2025. Please refer to **Attachment E** for the complete Universal Waste Inventory Table.

5

The findings of the hazardous materials visual inventory are summarized as follows:

Men's:

- Three (3) Incandescent Light Bulbs
- Four (4) Gallons of Miscellaneous Powder

Women's

- Three (3) Incandescent Light Bulbs

Verdantas.com

Limitations and Reliance

The findings and conclusions expressed in this report are based only on conditions observed during our survey of the building components. Verdantas makes no representation or assumptions as to past conditions or future occurrences. The findings of this report represent Verdantas's professional judgment; no other warranty is expressed or implied. This report is prepared to assist the building owner, architect, construction manager, general contractors, and potential asbestos abatement contractors in locating ACM, and hazardous materials. This report is not intended as a bidding document or as a project specification document. The limitations of the survey may not qualify this report to be adequate for all EPA and/or OSHA applications.

Our professional services have been performed, our findings obtained, and our conclusions and recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present at a location not investigated.

This report is for the exclusive use of The Village of Jefferson. The scope of services performed in execution of this evaluation may not be appropriate to satisfy the needs of other users and use or reuse of this document or the findings, conclusions, or recommendations is at the risk of said user.

We appreciate the opportunity to be of service to Verdantas for this project and look forward to working with you on future assignments. If you have questions about information in this report or if we can be of further assistance, please contact us at (440)530-2213.

6

Respectfully,

Brendan Niehaus

Staff Scientist I

Steve Regovich Senior Scientist

Steve Regovich Verdantas LLC 6397 Emerald Parkway, Suite 200 Dublin, OH 43016

CLIENT PROJECT: Memorial Park Restrooms

LAB CODE: 685469-1

Dear Steve,

Enclosed are asbestos analysis results for PLM Bulk samples received at our laboratory on August 27, 2025. The samples were analyzed for asbestos using polarizing light microscopy (PLM) per the EPA 600/R-93/116: Method for the Determination of Asbestos in Bulk Building Materials and EPA 40 CFR Appendix E to Subpart E of Part 763: Interim Method of the Determination of Asbestos in Bulk Insulation Samples.

Sample results containing >1% asbestos are considered asbestos-containing materials (ACMs) per EPA regulatory requirements. The detection limit for the EPA 600 Method is <1% by calibrated visual estimate.

Thank you for your business and we look forward to continuing good relations.

Kind Regards,

Tianbao Bai, Ph.D., CIH Laboratory Director

NVLAP 600323-0

LEGEND:

Non-Anth = Non-Asbestiform Anthophyllite Non-Trem = Non-Asbestiform Tremolite Calc Carb = Calcium Carbonate

METHOD: EPA 600 / R93 / 116 and EPA 40 CFR Appendix E to Subpart E of Part 763

REPORTING LIMIT: 1% by calibrated visual estimation

REGULATORY LIMIT: 1%

Due to the limitations of the EPA 600 / R93 / 116 method, nonfriable organically bound materials (NOBs) such as vinyl floor tiles can be difficult to analyze via polarized light microscopy (PLM). EPA recommends that all NOBs analyzed by PLM, and found not to contain asbestos, be further analyzed by Transmission Electron Microscopy (TEM). Please note that PLM analysis of dust and soil samples for asbestos is not covered under NVLAP accreditation. Estimated measurement of uncertainty is available on request.

Eurofins Built Environment Testing East, LLC makes no warranty representation regarding the accuracy of client submitted information in preparing and presenting analytical results.
